Abstract:

Source: WO03072434A1 A safety device for a means of transport for people, particularly for a passenger aircraft, comprises a number of stunning units (1, 2) placed in the area of the aisles (5). These stunning units (1, 2) can be activated, for example, in the event the means of transport is hijacked, and are designed for subduing individuals (9) who are located near the stunning units (1, 2).
